

412-01 CLIMATE CONTROL

heater-blower-control box

The wiring diagram shows how to connect the 8 wires of the "danhag" heater-blower-control-box to the original wires of the DC3.

Please note:

The red wire has to be connected to the black wire (output) of the GSM-remote-control, brown to ground.
The orange wire has to be connected to ignition (to be found eg. at the cigarette lighter)

There will be an car wire harness available. The GSM-remote should be installed inside the glove compartment to insure proper GSM signal.
